*Permitted claim in the US only

What is a Botanical Active Ingredient?

In nature, plants produce germ-killing 'essential oils' to protect themselves from invading microbes, similar to how our bodies produce antibodies for our protection against disease.

Benefect is a revolutionary blend of these antimicrobial extracts, particularly from the herb Thyme. Using these essential oils from plants allows Benefect to achieve an unprecedented Category IV toxicity rating with a broad spectrum disinfectant. To put it simply, Benefect is a 'plant immune system' in a bottle.

It's About Thyme!™

The Only Authentically Botanical Disinfectants.

No Rinse or Wipe Required, Even on Food Contact Surfaces!
